

Dynasafe Demil Systems and Dynasafe Protection Systems have received two important orders

Dynasafe Demil Systems AB and Dynasafe Protection Systems AB, with head offices in Karlskoga and part of the Dynasafe Group, have received two important orders.

Comments from Site Manager, Jörgen Björkman:

These two orders confirm Dynasafe's position as a leading global supplier of technology within both demilitarisation and systems for protection against explosions. The two projects provide a good base for 2014. When both projects are based on previously developed designs, the company still have the means to bring in additional significant orders, which is also expected.

Dynasafe Demil Systems have sold a SDC plant to China

Dynasafe Demil Systems specialize in building facilities for the destruction of conventional and chemical munitions, and associated off-gas cleaning systems. The core technology is the gas-tight, indirectly heated, destruction chamber Static Detonation Chamber (SDC). In a SDC plant ammunition is fed through an automated system into the gas-tight destruction chamber where it is heated and rendered harmless. The process gases are purified in a separate off-gas treatment system. The remaining scrap metal is heat treated inside the SDC-chamber and is then safe for recycling.

Now Dynasafe Demil Systems have sold a SDC plant for destruction of conventional ammunition to China. The order is the first one to China and may be considered as a breakthrough in the Chinese market. The plant will be shipped from Sweden and Germany in mid-2014. Dynasafe is also responsible for the assembly in China, which will be conducted by staff from both Dynasafe and from the companies that help Dynasafe to build the plant in Sweden and Germany.

Dynasafe Protection Systems have received an order of 10 new DynaROVR systems

The core business of Dynasafe Protection Systems is gas-tight bomb chambers with different sizes, configurations, and options. The now obtained order is a supply of ten DynaROVR systems, i.e. systems for the safe removal, containment and transport of grenades, artillery shells, mines, duds, IED's, UXO's etc, consisting of:

- Radio-controlled DynaROVR vehicle, equipped with a hydraulic loading crane and an in house developed fragment-shielded gripping tool to pick up objects with
- In house developed vision system and an operators cabin to control the unit from, with up to 1km range
- Gas-tight DynaSEALR bomb chamber
- Mounted on a trailer for transport of the system

Patrik Rylander, Managing Director Sales at Dynasafe Protection Systems AB, comments:
This order demonstrates the technical expertise that we have within our company and that we are competitive in this technology-driven business. Furthermore, that we are flexible and responsive to customer demands. We see a continued development of our DynaROVR system with additional capabilities that could ultimately give us access to new market segments and customer groups. We are very happy for this order and see a positive future for this system and other products in our portfolio.

About Dynasafe

Dynasafe Demil Systems AB and Dynasafe Protection Systems AB, with head offices in Karlskoga, are part of the Dynasafe Group.

Dynasafe Group

The Dynasafe Group is a world-leading company specialising in the removal and management of UXO, CBRNe and other hazardous materials. Dynasafe has about 1000 employees, presence in around 50 countries, and over twenty years of experience operating in regions affected by landmines, UXO or terrorist activity. We are the only supplier covering the full disposal value chain, and we have the expertise to deliver disposal and protection systems as one integrated solution. Our products and activity make the world a safer place.

Dynasafe Protection Systems

Dynasafe Protection Systems is the only supplier providing gas-tight chambers for repetitive detonations in combination with maximised openings. We offer the ultimate standard of gas-tight chambers, for total containment of effects caused by explosions, to customer segments such as defence, law enforcement, airports, public security and industry & research, and scenario-based consulting and training. You can expect the highest security level you can get.

Dynasafe Demil Systems

Dynasafe Demil System continues to lead development in response to the increasing demand for sound munitions disposal technologies which offer safe solutions for the dismantling, destruction and disposal of munitions. This can include anything from military weapons to bombs (EOD) and shells. We offer tailor made solutions to meet the unique and varying requirements of each disposal operation.
